

Contents

Preface.....	xvii
CHAPTER 1 An introduction to asset pricing models	1
1.1 Historical asset pricing models.....	1
1.2 The beginning of modern asset pricing models.....	3
1.2.1 Markowitz portfolio optimization.....	3
1.2.1.1 Portfolio return and risk.....	6
1.2.1.2 The optimization problem.....	7
1.2.1.3 The Lagrangian formulation	7
1.2.1.4 The minimum risk hyperbola	9
1.2.1.5 The global minimum variance (global minimum risk) portfolio.....	10
1.2.1.6 The efficient frontier	11
1.2.1.7 Efficient portfolios and their zero-correlation “matching” portfolios.....	12
1.2.1.8 Deriving the equation for a tangent line to the minimum standard deviation hyperbola.....	13
1.2.1.9 Correlation between portfolios	15
1.3 The Two-Fund theorem	16
1.4 The CAPM with a riskfree asset.....	18
1.5 Sharpe’s capital asset pricing model.....	19
1.5.1 Estimating the CAPM model.....	21
1.6 Efficient markets	25
1.7 Studies that attack the CAPM	26
1.8 Does proving the CAPM wrong=market inefficiency? or, do efficient markets=the CAPM is correct?	27
1.9 Small capitalization and value stocks	28
1.9.1 Momentum stocks	30
1.10 The asset pricing models of today	34
1.10.1 Introduction to multifactor models.....	34
1.10.2 Multifactor models of stock returns	36
1.10.2.1 Regression-based models.....	36
1.10.3 Multifactor models of bond returns.....	39
1.11 The q-factor pricing model.....	41
1.11.1 Economic intuition	42
1.11.1.1 Marginal q and investment	42
1.11.1.2 Expected stock returns and investment.....	42

1.11.1.3 Investment and profitability channels.....	43
1.11.2 q-Model factor construction.....	44
1.11.3 Operationalizing the q-model	45
1.12 Summary.....	45
1.13 Limitations.....	45
1.14 Chapter-end problems	46
1.15 Appendix: calculus operations using matrix algebra.....	47
References	50

CHAPTER 2 An introduction to returns-based performance evaluation and potential biases in its econometric application.....

2.1 Introduction	53
2.2 Goals, guidelines, and perils of performance evaluation	54
2.2.1 Benchmarks	55
2.2.2 Performance measures	57
2.2.3 Manipulation-proof performance measures.....	58
2.2.4 Type I or Type II error (which would you prefer?).....	59
2.2.5 The confounding role of risk-aversion.....	61
2.3 Returns-based performance assessment.....	61
2.3.1 Baseline models	62
2.3.2 Models with timing factors.....	63
2.3.3 Return smoothing	65
2.3.4 Non-normal alphas	65
2.3.5 Nonstable regression parameters	67
2.3.6 Unpriced benchmarks.....	67
2.3.7 Bayesian methods.....	68
2.3.8 Conditional returns-based performance measurement.....	69
2.3.9 Stochastic discount factors.....	71
2.3.10 False-discovery rate approach to measuring performance of a group of funds.....	72
2.3.11 The frequency of return reporting	73
2.3.11.1 High-frequency returns data	73
2.3.11.2 Low-frequency returns data	74
2.3.12 Overlapping observations corrected standard errors.....	75
2.3.12.1 An example using overlapping quarterly returns	77
2.5 Chapter-end Problems	78
References	80

CHAPTER 3	Returns-based performance measures	83
3.1	Introduction	83
3.2	Luck versus skill	86
3.3	The ultimate goal of performance measures	90
3.4	Two nonregression approaches	90
3.4.1	The Sharpe Ratio	90
3.4.2	Tracking error	96
3.5	Regression-based performance measures	98
3.5.1	Single-factor alpha ("Jensen alpha")	99
3.5.2	Multiple-factor alpha	103
3.5.3	Timing and selectivity performance measures	110
3.5.4	Conditional regression models	111
3.5.5	The Information Ratio as a performance measure	112
3.6	Chapter-end problems	119
	References	121
CHAPTER 4	Portfolio holdings-based performance evaluation	123
4.1	Introduction	124
4.2	Unconditional holdings-based performance measurement	126
4.2.1	The self-benchmarking method of performance evaluation	127
4.2.1.1	Statistical foundations	127
4.2.1.2	Empirical evidence	141
4.2.1.3	Relation to the Brinson, Hood, and Beebower attribution approach	141
4.2.2	The DGTW method of performance evaluation for equity portfolios	144
4.2.2.1	The characteristic selectivity measure	145
4.2.2.2	The characteristic timing measure	153
4.2.2.3	The average style measure	153
4.2.2.4	Summing the components	154
4.2.2.5	Comparison of DGTW measures with factor-based regression approaches	154
4.2.2.6	Extensions	155
4.2.2.7	Empirical evidence	158
4.2.2.8	The correlation between performance measures	159
4.2.3	The Cici and Gibson method of performance evaluation for bond portfolios	162
4.2.4	The Cohen, Coval, and Pastor method of performance evaluation	162

4.3	Conditional holdings-based performance measurement.....	163
4.3.1	The Ferson-Khang conditional portfolio holdings approach	165
4.3.1.1	Description	165
4.3.1.2	Estimation.....	166
4.3.1.3	Empirical evidence.....	166
4.4	Chapter-end problems	167
	References	170
	Further reading	172

CHAPTER 5 Combining portfolio holdings-based and returns-based performance evaluation (and the “return gap”)

		173
5.1	Introduction	173
5.2	Performance decomposition methodology	174
5.2.1	The characteristic selectivity measure.....	175
5.2.1.1	Examples of style drift.....	176
5.2.1.2	Benchmarking stocks (computing abnormal returns)	178
5.2.1.3	Example of the CS measure for US mutual funds (a return to our famous managers).....	179
5.2.1.4	Benchmarking bonds (computing abnormal returns).....	183
5.2.2	The characteristic timing measure.....	183
5.2.3	The average style measure.....	184
5.2.4	Trade execution costs.....	185
5.2.5	Measuring net return selectivity	186
5.3	Application to US domestic equity mutual funds.....	187
5.4	Empirical results for US domestic equity mutual funds	193
5.4.1	Overall mutual fund returns.....	193
5.4.2	Benchmark-adjusted mutual fund returns	197
5.4.3	The correlation between performance measures	199
5.4.4	Baseline mutual fund return decomposition	203
5.4.5	A comparison of the average mutual fund to the Vanguard Index 500 fund.....	209
5.4.6	Do funds that trade more frequently generate better performance?.....	210
5.5	Results for US domestic corporate bond mutual funds.....	213
5.6	Appendix A	213
5.6.1	Description of matching process for LSEG 12 and CRSP mutual fund databases	213

5.7	Appendix B	215
5.7.1	Description of execution cost estimation procedure	215
5.8	Chapter-end problems	217
	References	218
	Further reading	219
CHAPTER 6	Fund manager selection using macroeconomic information	221
6.1	Introduction	221
6.2	A dynamic model of managed fund returns	222
6.2.1	The “Dogmatist”	224
6.2.2	The “Skeptic”	225
6.2.3	The “Agnostic”	226
6.2.4	Optimal portfolios of managed funds	226
6.3	Empirical example: US domestic equity fund data	229
6.4	Empirical example: results for US domestic equity funds	231
6.4.1	Optimal portfolios of equity mutual funds	232
6.4.2	Out-of-sample performance	237
6.4.3	The determinants of the superior predictability-based performance	245
6.4.3.1	Attributes of portfolio strategies	245
6.4.3.2	Industry allocation analysis	250
6.4.3.3	Industry attribution analysis	254
6.4.4	Survivorship bias	258
6.5	Chapter-end problems	259
6.6	Appendix A: Description of mutual fund database	259
A.1	Investment objectives	259
A.2	Net returns	260
A.3	Turnover and expenses	261
A.4	Flows	261
6.7	Appendix B: Investments when fund risk loadings and benchmark returns may be predictable	261
B.1	Prior beliefs	261
B.2	The likelihood function	262
B.3	The predictive moments	263
6.8	Appendix C: Investments when skills may be predictable	264
C.1	The Agnostic	264
C.2	The Skeptic	264
	References	266

CHAPTER 7 Performance evaluation of market timers:

a new approach 269

7.1	Introduction	269
7.2	Methodology.....	273
7.2.1	Cashflow and discount rate components of market returns.....	274
7.2.2	Construction of fund beta	274
7.2.3	A differential return timing measure.....	275
7.3	Data and variable construction	275
7.4	Empirical analysis of timing performance	277
7.5	Identifying funds with timing skills	281
7.5.1	Characteristics of funds ranked on past-year total timing	282
7.5.2	Timing performance for funds sorted on past-year total timing	282
7.5.3	Strategic shifts in fund betas	287
7.5.4	Other dimensions of fund portfolio performance	289
7.6	Further characterizing cashflow versus discount rate timing ...	291
7.6.1	Industry rotation	291
7.6.2	Large-cap versus small-cap and value versus growth mutual funds	295
7.6.3	Negative discount rate timing and aggregate fund net flows.....	298
7.7	Additional analyses and robustness tests	299
7.7.1	Initiating buys and terminating sells	299
7.7.2	Time-varying cash positions.....	301
7.7.3	A placebo test using index funds	301
7.7.4	Using different approaches to decompose the market return	302
7.7.5	Timing ability over the business cycle	302
7.7.6	Other tests.....	303
7.8	Chapter-end problems	304
	References	304
	Further reading	307

CHAPTER 8 Performance evaluation of non-normal portfolios.... 309

8.1	Introduction	309
8.2	Bootstrap evaluation of fund alphas.....	311
8.2.1	Rationale for the bootstrap approach	311
8.2.1.1	Individual mutual fund alphas	311
8.2.1.2	The cross-section of mutual fund alphas	312

8.2.2	Implementation example: US domestic equity mutual funds.....	315
8.2.2.1	The baseline bootstrap procedure: residual resampling	316
8.2.2.2	Bootstrap extensions	317
8.3	Data.....	318
8.4	Results for US equity funds	318
8.4.1	The normality of individual fund alphas.....	318
8.4.2	Bootstrap analysis of the significance of alpha outliers	319
8.4.2.1	Baseline bootstrap tests: residual resampling	319
8.5	Sensitivity analysis.....	328
8.5.1	Time series dependence	328
8.5.2	Residual and factor resampling	329
8.5.3	Cross-sectional bootstrap	330
8.5.4	Length of data records	330
8.5.5	Bootstrap tests for stockholdings-based alphas.....	331
8.6	Performance persistence.....	336
8.7	Chapter-end problems	341
	References	342
	Further reading	343
CHAPTER 9	Multiple fund performance evaluation: the false discovery rate approach	345
9.1	Introduction	345
9.2	The impact of luck on managed fund performance	347
9.2.1	Overview of the approach	347
9.2.1.1	Luck in a multiple fund setting	347
9.2.1.2	Measuring luck.....	350
9.2.1.3	Estimation procedure	351
9.2.2	Comparison of our approach with existing methods....	353
9.2.3	Cross-sectional dependence among funds.....	356
9.3	An empirical example: US domestic equity mutual funds.....	357
9.3.1	Asset pricing models.....	357
9.3.2	Data.....	358
9.4	An empirical example: results for US domestic equity funds.....	359
9.4.1	The impact of luck on long-term performance.....	359
9.4.2	The impact of luck on short-term performance.....	365
9.4.3	Performance persistence.....	370

9.4.4	Additional results	374
9.4.4.1	Performance measured with pre-expense returns	374
9.4.4.2	Performance measured with other asset pricing models	376
9.4.4.3	Bayesian interpretation	378
9.5	Chapter-end problems	381
	References	381
	Further reading	383

CHAPTER 10 Holding Horizon: a new measure of active investment management

		385
10.1	Introduction	385
10.2	Empirical methodology	387
10.2.1	The measure of holding horizon	387
10.2.2	Risk models	390
10.3	Data and summary statistics	392
10.3.1	Summary statistics	393
10.3.2	The persistence of fund holding horizon	399
10.4	Empirical results on fund performance	399
10.4.1	Fund performance using a sorted portfolio approach	399
10.4.2	Fund performance using Fama–MacBeth regressions	411
10.4.3	Value added from financial markets	415
10.5	The horizon–performance relation at the stock level	419
10.5.1	Informativeness of fund holdings	419
10.5.2	Economic source	423
10.6	Comparison of H-H with portfolio turnover	425
10.7	The demand side	430
10.8	Additional analyses and robustness tests	433
10.8.1	Being a new dimension of active fund management	433
10.8.2	Illiquidity	433
10.8.3	Out-of-sample test of H-H’s ex ante predictability	434
10.8.4	Fund performance conditional on benchmarks	434
10.8.5	Other tests	435
10.9	Chapter-end problems	436
10.10	Appendix	437
	References	438

CHAPTER 11 Target date funds: an analysis of strategies and performance	443
11.1 Introduction	443
11.2 Related literature	445
11.3 The evolution of target date funds' role in US retirement savings	447
11.3.1 Description of target date funds	447
11.3.2 The rise of target date funds to become a fundamental pillar of US retirement savings	448
11.4 Heterogeneity across target date fund suites	450
11.4.1 Variation in glide paths	450
11.4.1.1 Description and evolution of glide paths	450
11.4.1.2 To be "to" or to be "through": that is the question!	452
11.4.2 Variation in asset allocations	453
11.4.3 Glide path design	458
11.4.4 Variation in the use of tactical asset allocation	459
11.4.5 Active versus passive underlying funds: yet another choice to be made	459
11.4.6 Variation in investment fund structure	460
11.5 Evaluating the quality of target date fund suites	462
11.5.1 Overview of the evaluation of investment funds	462
11.5.2 Complications in evaluating target date funds	464
11.5.3 Framework for evaluating target date funds	465
11.5.3.1 Evaluating a target date fund's investment objectives and associated profile of risk and expected returns	465
11.5.3.2 Evaluating a target date fund manager's ability to implement the target date fund's investment objectives	466
11.5.3.3 Do multiple comparisons over multiple periods	469
11.5.3.4 Performance attribution to evaluate the underlying drivers of target date funds performance	470
11.5.3.5 Comparison of ex post asset class returns to ex ante expected returns	471
11.6 Future Developments in the TDF Marketplace	472
11.7 Conclusion	473
11.8 Chapter-end problems	473
References	474

CHAPTER 12 Fund rating systems	481
12.1 Introduction	481
12.1.1 Ideal properties of a rating system	482
12.1.2 Objectives of a fund rating system	484
12.2 Quantitative versus qualitative performance metrics	484
12.3 Handling historical fund data	487
12.3.1 Backfilling of returns of liquidated funds and splicing of returns of merged or acquired funds	488
12.3.2 Assessment of managed funds in the presence of overlapping data observations	489
12.4 The Morningstar rating systems	490
12.4.1 The style box classification system	490
12.4.2 The Morningstar Star Rating system	492
12.4.2.1 Computation of the Morningstar risk-adjusted return	493
12.4.2.2 Within-category ranking on the Morningstar risk-adjusted return	494
12.4.3 Is the Star Rating system predictive of risk-adjusted performance?	496
12.4.4 The Morningstar Analyst Rating system	499
12.4.4.1 The Morningstar quantitative rating system and the Morningstar Medalist Rating system	502
12.4.5 Are the Morningstar Medalist Ratings predictive of fund risk-adjusted returns?	503
12.4.6 The Morningstar Sustainability Rating system	505
12.5 The Lipper rating systems	506
12.5.1 The Lipper fund classification system	506
12.5.2 The Lipper Leader rating system	508
12.5.3 Is the Lipper Leader rating system predictive of risk-adjusted performance?	510
12.6 The Zacks rating system	510
12.7 Standard and Poor's rating systems	513
12.8 Other investment rating services	515
12.9 Do the fund ratings services conform to the ideals proposed by peer-reviewed academic literature?	515
12.10 The future of fund ratings systems	517
12.11 Chapter-end problems	519
References	520
Further reading	522

CHAPTER 13 Active management in mostly efficient markets: a survey of the academic literature	523
13.1 Introduction	523
13.2 Some caveats	524
13.3 Does active management add value?	525
13.4 Active management and “mostly efficient markets”	527
13.5 Identifying superior active managers	529
13.5.1 Past performance	529
13.5.2 Macroeconomic forecasting	533
13.5.3 Fund/manager characteristics	536
13.5.4 Portfolio holdings analysis	540
13.5.4.1 Active share	542
13.5.4.2 News sensitivity and interpretation	543
13.5.5 Value added performance	544
13.5.6 Active risk budgeting	545
13.6 Conclusions	548
13.7 Chapter-end problems	549
References	549
Further reading	552
Index	553

A complete solutions manual for all chapter-end problems in this volume
is available from the author, russwermers@gmail.com
