Preface.....	xi
--------------	----

CHAPTER 1 Basic performance evaluation models	1
Basis formula for the calculation of returns	1
Geometric linkage and scaling of returns	3
Internal rate of return.....	6
Time-weighted return.....	9
General aspects of the time-weighted return.....	9
Returns for investment funds based on the unit price	11
Comparison between the time-weighted return and the internal rate of return.....	19
Approximation methods for the computation of the time-weighted return	27
Approximation of the time-weighted return based on the internal rate of return	30
Modified Dietz method.....	32
Dietz method and BAI method.....	39
Second-order Newton approximation	40
Active returns	41
Continuously compounded returns	44
Symmetry of the return calculation.....	48
Graphic representation of the performance.....	48
Appendix A: Equality between the time-weighted return and the internal rate of return.....	51
Appendix B: solving polynomial equations for the determination of internal rate of return.....	52
B.1 Newton's Method	53
Appendix C: time-weighted return and the unit price method.....	55
Conclusion.....	55
Chapter-end problems	56

CHAPTER 2 Passive and active portfolio management and the characteristics of benchmarks	61
Basic concepts	61
Is passive passive?	65
What is passive?.....	66
If the portfolio is not passive, what is passive?	69

Active managers are the entrepreneurs of finance	71
Indexes as a representation of the market portfolio?	72
Conclusion	78
Chapter-end problems	79
References	81
 CHAPTER 3 Attribution analysis for equity portfolios	83
Introduction to attribution analysis	83
Goals of an attribution analysis	83
Overall return as the weighted sum of individual returns	85
Single-period attribution analysis according to the	
Brinson approach	91
allocation and selection	91
Dealing with securities outside the benchmark and portfolio	104
Interpretation of the interaction terms	109
Breakdown of the contributions on a single-stock-level	119
Multiperiod attribution analysis	122
Basic formulas for linking contributions in the	
multiperiod case	122
Approach according to basic formula I	128
Approach according to basic formula II	136
Approach according to basic formula III	139
Concluding remarks on the linking algorithms	140
Attribution analysis in a geometric form	145
Method of Burnie et al.	145
Further aspects of attribution analysis	150
Position-based vs transaction-based attribution analysis	150
Factor-based attribution analysis	152
Attribution analysis and valuation questions	158
Conclusion	159
Chapter-end problems	160
References	161
 CHAPTER 4 Introduction to multicurrency performance	
attribution	163
Introduction to multicurrency performance attribution	163
Theoretical background	167
Karnosky-Singer model: integrating currency effects	170
The multicurrency investment opportunities and	
performance measurement	178

Generalized solution for multicurrency performance attribution	184
Attribution analysis with derivative-based currency management.....	193
Currency premium and currency surprise	193
Conclusion	199
Chapter-end problems	201
References	202

CHAPTER 5 Attribution analysis for fixed income

portfolios.....	205
Investment processes for fixed income portfolios	205
Determinants of investment processes for fixed income portfolios	205
Comparison with the methodology for equity portfolios.....	213
Yield curves based attribution analysis using an option-adjusted spread valuation approach	219
Model evaluation	219
Description of the effects.....	221
Attribution relative to a benchmark.....	231
Analysis with a separation of the interaction terms.....	236
Generalization of portfolios with different currency segments	239
Inclusion of models for the estimation of yield curves.....	241
The methods of Nelson and Siegel, and Svensson	241
Principal component analysis.....	246
Alternative approaches.....	250
Consideration of reference portfolios	250
Duration-based approaches.....	256
Appendix A: Duration measures Macaulay duration	259
Appendix B: Duration measures Modified duration.....	263
Appendix C: Duration measures Effective duration.....	263
Appendix D: Duration measures Key rate duration	264
Appendix E: Duration measures Spread duration	267
Conclusion	267
Chapter-end problems	268
Exercise 5.1 (Roll-down effect).....	268
Exercise 5.2 (Market implicit interest rates)	268
Exercise 5.3 (Nelson-Siegel method)	268
Exercise 5.4 (Svensson's method)	268

CHAPTER 6	Analysis of multiasset class portfolios and hedge funds	269
	Basic considerations.....	269
	Attribution analysis on two levels.....	271
	Contributions without separating the currency components	271
	Attribution analysis on three levels.....	280
	Contributions without separating the currency effects.....	281
	Contributions after separating currency effects.....	283
	Implementation.....	287
	Risk-adjusted attribution analysis based on the systematic risk	287
	Introduction.....	287
	Intuitive derivation via the investment process.....	288
	Approach according to Ankrim	298
	Risk-adjusted attribution analysis based on the Information ratio	300
	Special aspects in the analysis of hedge funds.....	302
	Attribution analysis for portfolios with short positions	302
	Risk measures based on the drawdown.....	302
	Conclusion.....	306
	Chapter-end problems	307
CHAPTER 7	Attribution analysis with derivatives.....	311
	Treatment of futures and forwards.....	312
	Cost of carry	312
	Single-stock futures	314
	Stock market index futures	320
	Interest rate futures.....	327
	Treatment of options.....	334
	Options and their valuation.....	334
	Options on a single stock.....	336
	Options on stock indices	339
	Swaps	340
	Conclusion.....	341
	Chapter-end problems	342
	References	342
CHAPTER 8	Global Investment Performance Standards (GIPS)	343
	<i>David D. Spaulding</i>	
	Background.....	343

History.....	343
Applicability to asset owners	344
Fundamental features of the Standards.....	346
Organization definition.....	348
Composite creation.....	349
Policies and procedures	351
How the organization is defined	351
Keeping up with changes to the GIPS standards.....	352
Keeping up with changes to laws and regulations.....	352
Policy to register with the CFA Institute	352
Policy to assess the verifier's independence policies.....	353
How do they calculate their total assets?.....	353
Providing reports to prospective clients and stakeholders	353
Portability.....	354
Updating GIPS reports	354
List of composites and pooled funds (limited distribution pooled funds and broad distribution pooled funds)	354
Overlay exposure and returns	354
Use of trade date accounting	355
Interest and dividend accruals.....	355
Transaction costs—actual or estimated	355
The use of fair value for valuations	355
How returns are calculated.....	356
Side pockets and subscription lines of credit.....	357
Investment discretion.....	357
Nonfee-paying portfolios.....	357
How composites are defined	357
Timing for portfolios and composites	357
Use of minimums	358
Significant cash flow policy.....	358
Use of leverage, derivatives, and shorts.....	359
Use of subadvisors	359
Picking benchmarks.....	360
Use of carve-outs.....	360
Gips reports	363
Portfolio level performance	365
Time-weighting formulas	366
Money-weighted returns.....	367
Asset owners.....	368

Gross- versus net-of-fee performance.....	368
Composite performance	369
Asset-weighted using the beginning value	369
Asset-weighted using the beginning value plus exogenous (or external or weighted) cash flows.....	370
Aggregate method.....	370
Dispersion	372
Asset-weighted standard deviation.....	372
Equal-weighted	373
High/low and range	373
Gips verification	374
Conclusion	374
Chapter-end problems	375
Appendix A: Calculating estimated transaction costs	376
A.1 A method to estimate transaction costs	377
A.2 Estimating transaction costs comes in two parts	377
A.3 Now that we have the transaction costs, how do we incorporate them into performance?	378
A.4 The challenges	380
A.5 A “simple” solution for monthly return methods	380
A.6 The firm’s policies and procedures	382
A.7 A solution for daily return methods	385
A.8 Conclusion	385
Appendix B: Shortcomings of The aggregate method for composite returns	386
B.1 An analysis of the aggregate method to calculate composite returns.....	386
B.2 Background	386
B.3 Problems with the aggregate method.....	387
B.4 What about the Basic “Asset-Weighting” method.....	396
B.5 Conclusion	396
Appendix C: What is meant by time-weighting?	397
Appendix D: How to create carve-outs?	398
D.1 How can we allocate the cash to the carved-out segments?	398
D.2 Additional rules	401
References	401
Index	403
