Preface	xxiii
1 Products and Markets: Equities, Commodities, Exchange Rates, Forwards and Futures	1
1.1 Introduction	2
1.2 Equities	2
1.2.1 Dividends	7
1.2.2 Stock splits	8
1.3 Commodities	9
1.4 Currencies	9
1.5 Indices	11
1.6 The time value of money	11
1.7 Fixed-income securities	17
1.8 Inflation-proof bonds	17
1.9 Forwards and futures	19
1.9.1 A first example of no arbitrage	20
1.10 More about futures	22
1.10.1 Commodity futures	23
1.10.2 FX futures	23
1.10.3 Index futures	24
1.11 Summary	24
2 Derivatives	27
2.1 Introduction	28
2.2 Options	28
2.3 Definition of common terms	33
2.4 Payoff diagrams	34
2.4.1 Other representations of value	34
2.5 Writing options	39
2.6 Margin	39
2.7 Market conventions	39
2.8 The value of the option before expiry	40
2.9 Factors affecting derivative prices	41

2.10	Speculation and gearing	42
2.11	Early exercise	44
2.12	Put-call parity	44
2.13	Binaries or digitals	47
2.14	Bull and bear spreads	48
2.15	Straddles and strangles	50
2.16	Risk reversal	52
2.17	Butterflies and condors	53
2.18	Calendar spreads	53
2.19	LEAPS and FLEX	55
2.20	Warrants	55
2.21	Convertible bonds	55
2.22	Over the counter options	56
2.23	Summary	57
3	The Binomial Model	59
3.1	Introduction	60
3.2	Equities can go down as well as up	61
3.3	The option value	63
3.4	Which part of our 'model' didn't we need?	65
3.5	Why should this 'theoretical price' be the 'market price'?	65
3.5.1	The role of expectations	66
3.6	How did I know to sell $\frac{1}{2}$ of the stock for hedging?	66
3.6.1	The general formula for Δ	67
3.7	How does this change if interest rates are non-zero?	67
3.8	Is the stock itself correctly priced?	68
3.9	Complete markets	69
3.10	The real and risk-neutral worlds	69
3.10.1	Non-zero interest rates	72
3.11	And now using symbols	73
3.11.1	Average asset change	74
3.11.2	Standard deviation of asset price change	74
3.12	An equation for the value of an option	75
3.12.1	Hedging	75
3.12.2	No arbitrage	76
3.13	Where did the probability p go?	77
3.14	Counter-intuitive?	77
3.15	The binomial tree	78
3.16	The asset price distribution	78
3.17	Valuing back down the tree	80
3.18	Programming the binomial method	85
3.19	The greeks	86
3.20	Early exercise	88
3.21	The continuous-time limit	90
3.22	Summary	90

4	The Random Behavior of Assets	95
4.1	Introduction	96
4.2	The popular forms of 'analysis'	96
4.3	Why we need a model for randomness: Jensen's inequality	97
4.4	Similarities between equities, currencies, commodities and indices	99
4.5	Examining returns	100
4.6	Timescales	105
4.6.1	The drift	107
4.6.2	The volatility	108
4.7	Estimating volatility	109
4.8	The random walk on a spreadsheet	109
4.9	The Wiener process	111
4.10	The widely accepted model for equities, currencies, commodities and indices	112
4.11	Summary	115
5	Elementary Stochastic Calculus	117
5.1	Introduction	118
5.2	A motivating example	118
5.3	The Markov property	120
5.4	The martingale property	120
5.5	Quadratic variation	120
5.6	Brownian motion	121
5.7	Stochastic integration	122
5.8	Stochastic differential equations	123
5.9	The mean square limit	124
5.10	Functions of stochastic variables and Itô's lemma	124
5.11	Interpretation of Itô's lemma	127
5.12	Itô and Taylor	127
5.13	Itô in higher dimensions	130
5.14	Some pertinent examples	130
5.14.1	Brownian motion with drift	131
5.14.2	The lognormal random walk	132
5.14.3	A mean-reverting random walk	134
5.14.4	And another mean-reverting random walk	135
5.15	Summary	136
6	The Black-Scholes Model	139
6.1	Introduction	140
6.2	A very special portfolio	140
6.3	Elimination of risk: delta hedging	142
6.4	No arbitrage	142
6.5	The Black-Scholes equation	143
6.6	The Black-Scholes assumptions	145
6.7	Final conditions	146

6.8	Options on dividend-paying equities	147
6.9	Currency options	147
6.10	Commodity options	148
6.11	Expectations and Black–Scholes	148
6.12	Some other ways of deriving the Black–Scholes equation	149
6.12.1	The martingale approach	149
6.12.2	The binomial model	149
6.12.3	CAPM/utility	149
6.13	No arbitrage in the binomial, Black–Scholes and ‘other’ worlds	150
6.14	Forwards and futures	151
6.14.1	Forward contracts	151
6.15	Futures contracts	152
6.15.1	When interest rates are known, forward prices and futures prices are the same	153
6.16	Options on futures	153
6.17	Summary	153
7	Partial Differential Equations	157
7.1	Introduction	158
7.2	Putting the Black–Scholes equation into historical perspective	158
7.3	The meaning of the terms in the Black–Scholes equation	159
7.4	Boundary and initial/final conditions	159
7.5	Some solution methods	160
7.5.1	Transformation to constant coefficient diffusion equation	160
7.5.2	Green’s functions	161
7.5.3	Series solution	161
7.6	Similarity reductions	163
7.7	Other analytical techniques	163
7.8	Numerical solution	164
7.9	Summary	164
8	The Black–Scholes Formulæ and the ‘Greeks’	169
8.1	Introduction	170
8.2	Derivation of the formulæ for calls, puts and simple digitals	170
8.2.1	Formula for a call	175
8.2.2	Formula for a put	179
8.2.3	Formula for a binary call	181
8.2.4	Formula for a binary put	182
8.3	Delta	182
8.4	Gamma	184
8.5	Theta	187
8.6	Speed	187
8.7	Vega	188
8.8	Rho	190
8.9	Implied volatility	191
8.10	A classification of hedging types	194
8.10.1	Why hedge?	194

8.10.2	The two main classifications	194
8.10.3	Delta hedging	195
8.10.4	Gamma hedging	195
8.10.5	Vega hedging	195
8.10.6	Static hedging	195
8.10.7	Margin hedging	196
8.10.8	Crash (Platinum) hedging	196
8.11	Summary	196
9	Overview of Volatility Modeling	203
9.1	Introduction	204
9.2	The different types of volatility	204
9.2.1	Actual volatility	204
9.2.2	Historical or realized volatility	204
9.2.3	Implied volatility	205
9.2.4	Forward volatility	205
9.3	Volatility estimation by statistical means	205
9.3.1	The simplest volatility estimate: constant volatility/moving window	205
9.3.2	Incorporating mean reversion	206
9.3.3	Exponentially weighted moving average	206
9.3.4	A simple GARCH model	207
9.3.5	Expected future volatility	207
9.3.6	Beyond close-close estimators: range-based estimation of volatility	209
9.4	Maximum likelihood estimation	211
9.4.1	A simple motivating example: taxi numbers	211
9.4.2	Three hats	211
9.4.3	The math behind this: find the standard deviation	213
9.4.4	Quants' salaries	214
9.5	Skews and smiles	215
9.5.1	Sensitivity of the straddle to skews and smiles	216
9.5.2	Sensitivity of the risk reversal to skews and smiles	216
9.6	Different approaches to modeling volatility	217
9.6.1	To calibrate or not?	217
9.6.2	Deterministic volatility surfaces	218
9.6.3	Stochastic volatility	219
9.6.4	Uncertain parameters	219
9.6.5	Static hedging	220
9.6.6	Stochastic volatility and mean-variance analysis	220
9.6.7	Asymptotic analysis of volatility	220
9.7	The choices of volatility models	221
9.8	Summary	221
10	How to Delta Hedge	225
10.1	Introduction	226
10.2	What if implied and actual volatilities are different?	227

10.3	Implied versus actual, delta hedging but using which volatility?	228
10.4	Case 1: Hedge with actual volatility, σ	228
10.5	Case 2: Hedge with implied volatility, $\tilde{\sigma}$	231
10.5.1	The expected profit after hedging using implied volatility	232
10.5.2	The variance of profit after hedging using implied volatility	233
10.6	Hedging with different volatilities	235
10.6.1	Actual volatility = Implied volatility	236
10.6.2	Actual volatility > Implied volatility	236
10.6.3	Actual volatility < Implied volatility	238
10.7	Pros and cons of hedging with each volatility	238
10.7.1	Hedging with actual volatility	238
10.7.2	Hedging with implied volatility	239
10.7.3	Hedging with another volatility	239
10.8	Portfolios when hedging with implied volatility	239
10.8.1	Expectation	240
10.8.2	Variance	240
10.8.3	Portfolio optimization possibilities	241
10.9	How does implied volatility behave?	241
10.9.1	Sticky strike	242
10.9.2	Sticky delta	242
10.9.3	Time-periodic behavior	243
10.10	Summary	245
11	An Introduction to Exotic and Path-dependent Options	247
11.1	Introduction	248
11.2	Option classification	248
11.3	Time dependence	249
11.4	Cashflows	250
11.5	Path dependence	252
11.5.1	Strong path dependence	252
11.5.2	Weak path dependence	253
11.6	Dimensionality	254
11.7	The order of an option	255
11.8	Embedded decisions	256
11.9	Classification tables	258
11.10	Examples of exotic options	258
11.10.1	Compounds and choosers	258
11.10.2	Range notes	262
11.10.3	Barrier options	264
11.10.4	Asian options	265
11.10.5	Lookback options	265
11.11	Summary of math/coding consequences	266
11.12	Summary	267
12	Multi-asset Options	271
12.1	Introduction	272
12.2	Multidimensional lognormal random walks	272

12.3	Measuring correlations	274
12.4	Options on many underlyings	277
12.5	The pricing formula for European non-path-dependent options on dividend-paying assets	278
12.6	Exchanging one asset for another: a similarity solution	278
12.7	Two examples	280
12.8	Realities of pricing basket options	282
12.8.1	Easy problems	283
12.8.2	Medium problems	283
12.8.3	Hard problems	283
12.9	Realities of hedging basket options	283
12.10	Correlation versus cointegration	283
12.11	Summary	284
13	Barrier Options	287
13.1	Introduction	288
13.2	Different types of barrier options	288
13.3	Pricing methodologies	289
13.3.1	Monte Carlo simulation	289
13.3.2	Partial differential equations	290
13.4	Pricing barriers in the partial differential equation framework	290
13.4.1	'Out' barriers	291
13.4.2	'In' barriers	292
13.5	Examples	293
13.5.1	Some more examples	294
13.6	Other features in barrier-style options	300
13.6.1	Early exercise	300
13.6.2	Repeated hitting of the barrier	301
13.6.3	Resetting of barrier	301
13.6.4	Outside barrier options	301
13.6.5	Soft barriers	301
13.6.6	Parisian options	301
13.7	Market practice: what volatility should I use?	302
13.8	Hedging barrier options	305
13.8.1	Slippage costs	306
13.9	Summary	307
14	Fixed-income Products and Analysis: Yield, Duration and Convexity	319
14.1	Introduction	320
14.2	Simple fixed-income contracts and features	320
14.2.1	The zero-coupon bond	320
14.2.2	The coupon-bearing bond	321
14.2.3	The money market account	321
14.2.4	Floating rate bonds	322
14.2.5	Forward rate agreements	323
14.2.6	Repos	323
14.2.7	STRIPS	324

14.2.8	Amortization	324
14.2.9	Call provision	324
14.3	International bond markets	324
14.3.1	United States of America	324
14.3.2	United Kingdom	325
14.3.3	Japan	325
14.4	Accrued interest	325
14.5	Day-count conventions	325
14.6	Continuously and discretely compounded interest	326
14.7	Measures of yield	327
14.7.1	Current yield	327
14.7.2	The yield to maturity (YTM) or internal rate of return (IRR)	327
14.8	The yield curve	329
14.9	Price/yield relationship	329
14.10	Duration	331
14.11	Convexity	333
14.12	An example	335
14.13	Hedging	335
14.14	Time-dependent interest rate	338
14.15	Discretely paid coupons	339
14.16	Forward rates and bootstrapping	339
14.16.1	Discrete data	340
14.16.2	On a spreadsheet	342
14.17	Interpolation	344
14.18	Summary	346
15	Swaps	349
15.1	Introduction	350
15.2	The vanilla interest rate swap	350
15.3	Comparative advantage	351
15.4	The swap curve	353
15.5	Relationship between swaps and bonds	354
15.6	Bootstrapping	355
15.7	Other features of swaps contracts	356
15.8	Other types of swap	357
15.8.1	Basis rate swap	357
15.8.2	Equity swaps	357
15.8.3	Currency swaps	357
15.9	Summary	358
16	One-factor Interest Rate Modeling	359
16.1	Introduction	360
16.2	Stochastic interest rates	361
16.3	The bond pricing equation for the general model	362
16.4	What is the market price of risk?	365
16.5	Interpreting the market price of risk, and risk neutrality	366
16.6	Named models	366

16.6.1	Vasicek	366
16.6.2	Cox, Ingersoll & Ross	367
16.6.3	Ho & Lee	368
16.6.4	Hull & White	369
16.7	Equity and FX forwards and futures when rates are stochastic	369
16.7.1	Forward contracts	369
16.8	Futures contracts	370
16.8.1	The convexity adjustment	371
16.9	Summary	372
17	Yield Curve Fitting	373
17.1	Introduction	374
17.2	Ho & Lee	374
17.3	The extended Vasicek model of Hull & White	375
17.4	Yield-curve fitting: For and against	376
17.4.1	For	376
17.4.2	Against	376
17.5	Other models	380
17.6	Summary	380
18	Interest Rate Derivatives	383
18.1	Introduction	384
18.2	Callable bonds	384
18.3	Bond options	385
18.3.1	Market practice	387
18.4	Caps and floors	389
18.4.1	Cap/floor parity	389
18.4.2	The relationship between a caplet and a bond option	391
18.4.3	Market practice	391
18.4.4	Collars	391
18.4.5	Step-up swaps, caps and floors	392
18.5	Range notes	392
18.6	Swaptions, captions and floortions	392
18.6.1	Market practice	392
18.7	Spread options	394
18.8	Index amortizing rate swaps	394
18.8.1	Other features in the index amortizing rate swap	396
18.9	Contracts with embedded decisions	397
18.10	Some examples	398
18.11	More interest rate derivatives...	400
18.12	Summary	401
19	The Heath, Jarrow & Morton and Brace, Gatarek & Musiela Models	403
19.1	Introduction	404
19.2	The forward rate equation	404
19.3	The spot rate process	404
19.3.1	The non-Markov nature of HJM	406

19.4	The market price of risk	406
19.5	Real and risk neutral	407
19.5.1	The relationship between the risk-neutral forward rate drift and volatility	407
19.6	Pricing derivatives	408
19.7	Simulations	408
19.8	Trees	410
19.9	The Musiela parameterization	411
19.10	Multi-factor HJM	411
19.11	Spreadsheet implementation	411
19.12	A simple one-factor example: Ho & Lee	412
19.13	Principal Component Analysis	413
19.13.1	The power method	415
19.14	Options on equities, etc.	416
19.15	Non-infinitesimal short rate	416
19.16	The Brace, Gatarek & Musiela model	417
19.17	Simulations	419
19.18	PVing the cashflows	419
19.19	Summary	420
20	Investment Lessons from Blackjack and Gambling	423
20.1	Introduction	424
20.2	The rules of blackjack	424
20.3	Beating the dealer	426
20.3.1	Summary of winning at blackjack	427
20.4	The distribution of profit in blackjack	428
20.5	The Kelly criterion	429
20.6	Can you win at roulette?	432
20.7	Horse race betting and no arbitrage	433
20.7.1	Setting the odds in a sporting game	433
20.7.2	The mathematics	434
20.8	Arbitrage	434
20.8.1	How best to profit from the opportunity?	436
20.9	How to bet	436
20.10	Summary	438
21	Portfolio Management	441
21.1	Introduction	442
21.2	Diversification	442
21.2.1	Uncorrelated assets	443
21.3	Modern portfolio theory	445
21.3.1	Including a risk-free investment	447
21.4	Where do I want to be on the efficient frontier?	447
21.5	Markowitz in practice	450
21.6	Capital Asset Pricing Model	451
21.6.1	The single-index model	451
21.6.2	Choosing the optimal portfolio	453

21.7	The multi-index model	454
21.8	Cointegration	454
21.9	Performance measurement	455
21.10	Summary	456
22	Value at Risk	459
22.1	Introduction	460
22.2	Definition of Value at Risk	460
22.3	VaR for a single asset	461
22.4	VaR for a portfolio	463
22.5	VaR for derivatives	464
22.5.1	The delta approximation	464
22.5.2	The delta/gamma approximation	464
22.5.3	Use of valuation models	466
22.5.4	Fixed-income portfolios	466
22.6	Simulations	466
22.6.1	Monte Carlo	467
22.6.2	Bootstrapping	467
22.7	Use of VaR as a performance measure	468
22.8	Introductory Extreme Value Theory	469
22.8.1	Some EVT results	469
22.9	Coherence	470
22.10	Summary	470
23	Credit Risk	473
23.1	Introduction	474
23.2	The Merton model: equity as an option on a company's assets	474
23.3	Risky bonds	475
23.4	Modeling the risk of default	476
23.5	The Poisson process and the instantaneous risk of default	477
23.5.1	A note on hedging	481
23.6	Time-dependent intensity and the term structure of default	481
23.7	Stochastic risk of default	482
23.8	Positive recovery	484
23.9	Hedging the default	485
23.10	Credit rating	486
23.11	A model for change of credit rating	488
23.12	Copulas: pricing credit derivatives with many underlyings	488
23.12.1	The copula function	489
23.12.2	The mathematical definition	489
23.12.3	Examples of copulas	490
23.13	Collateralized debt obligations	490
23.14	Summary	492
24	RiskMetrics and CreditMetrics	495
24.1	Introduction	496
24.2	The RiskMetrics datasets	496

24.3	Calculating the parameters the RiskMetrics way	496
24.3.1	Estimating volatility	497
24.3.2	Correlation	498
24.4	The CreditMetrics dataset	498
24.4.1	Yield curves	499
24.4.2	Spreads	500
24.4.3	Transition matrices	500
24.4.4	Correlations	500
24.5	The CreditMetrics methodology	501
24.6	A portfolio of risky bonds	501
24.7	CreditMetrics model outputs	502
24.8	Summary	502
25	CrashMetrics	505
25.1	Introduction	506
25.2	Why do banks go broke?	506
25.3	Market crashes	506
25.4	CrashMetrics	507
25.5	CrashMetrics for one stock	508
25.6	Portfolio optimization and the Platinum hedge	510
25.6.1	Other 'cost' functions	511
25.7	The multi-asset/single-index model	511
25.7.1	Assuming Taylor series for the moment	517
25.8	Portfolio optimization and the Platinum hedge in the multi-asset model	519
25.8.1	The marginal effect of an asset	520
25.9	The multi-index model	520
25.10	Incorporating time value	521
25.11	Margin calls and margin hedging	522
25.11.1	What is margin?	522
25.11.2	Modeling margin	522
25.11.3	The single-index model	524
25.12	Counterparty risk	524
25.13	Simple extensions to CrashMetrics	524
25.14	The CrashMetrics Index (CMI)	525
25.15	Summary	526
26	Derivatives **** Ups	527
26.1	Introduction	528
26.2	Orange County	528
26.3	Proctor and Gamble	529
26.4	Metallgesellschaft	532
26.4.1	Basis risk	533
26.5	Gibson Greetings	533
26.6	Barings	536
26.7	Long-Term Capital Management	537
26.8	Summary	540

27 Overview of Numerical Methods	541
27.1 Introduction	542
27.2 Finite-difference methods	542
27.2.1 Efficiency	543
27.2.2 Program of study	543
27.3 Monte Carlo methods	544
27.3.1 Efficiency	545
27.3.2 Program of study	545
27.4 Numerical integration	546
27.4.1 Efficiency	546
27.4.2 Program of study	546
27.5 Summary	547
28 Finite-difference Methods for One-factor Models	549
28.1 Introduction	550
28.2 Grids	550
28.3 Differentiation using the grid	553
28.4 Approximating θ	553
28.5 Approximating Δ	554
28.6 Approximating Γ	557
28.7 Example	557
28.8 Bilinear interpolation	558
28.9 Final conditions and payoffs	559
28.10 Boundary conditions	560
28.11 The explicit finite-difference method	562
28.11.1 The Black–Scholes equation	565
28.11.2 Convergence of the explicit method	565
28.12 The Code #1: European option	567
28.13 The Code #2: American exercise	571
28.14 The Code #3: 2-D output	573
28.15 Upwind differencing	575
28.16 Summary	578
29 Monte Carlo Simulation	581
29.1 Introduction	582
29.2 Relationship between derivative values and simulations: equities, indices, currencies, commodities	582
29.3 Generating paths	583
29.4 Lognormal underlying, no path dependency	584
29.5 Advantages of Monte Carlo simulation	585
29.6 Using random numbers	586
29.7 Generating Normal variables	587
29.7.1 Box–Muller	587
29.8 Real versus risk neutral, speculation versus hedging	588
29.9 Interest rate products	590
29.10 Calculating the greeks	593
29.11 Higher dimensions: Cholesky factorization	594

29.12	Calculation time	596
29.13	Speeding up convergence	596
29.13.1	Antithetic variables	597
29.13.2	Control variate technique	597
29.14	Pros and cons of Monte Carlo simulations	598
29.15	American options	598
29.16	Longstaff & Schwartz regression approach for American options	599
29.17	Basis functions	603
29.18	Summary	603
30	Numerical Integration	605
30.1	Introduction	606
30.2	Regular grid	606
30.3	Basic Monte Carlo integration	607
30.4	Low-discrepancy sequences	609
30.5	Advanced techniques	613
30.6	Summary	614
A	All the Math You Need . . . and No More (An Executive Summary)	617
A.1	Introduction	618
A.2	e	618
A.3	log	618
A.4	Differentiation and Taylor series	620
A.5	Differential equations	623
A.6	Mean, standard deviation and distributions	623
A.7	Summary	626
B	Forecasting the Markets? A Small Digression	627
B.1	Introduction	628
B.2	Technical analysis	628
B.2.1	Plotting	628
B.2.2	Support and resistance	628
B.2.3	Trendlines	629
B.2.4	Moving averages	629
B.2.5	Relative strength	632
B.2.6	Oscillators	632
B.2.7	Bollinger bands	632
B.2.8	Miscellaneous patterns	633
B.2.9	Japanese candlesticks	635
B.2.10	Point and figure charts	635
B.3	Wave theory	637
B.3.1	Elliott waves and Fibonacci numbers	638
B.3.2	Gann charts	638
B.4	Other analytics	638
B.5	Market microstructure modeling	640
B.5.1	Effect of demand on price	640

	B.5.2	Combining market microstructure and option theory	641
	B.5.3	Imitation	641
B.6		Crisis prediction	641
B.7		Summary	641
C	A Trading Game		643
	C.1	Introduction	643
	C.2	Aims	643
	C.3	Object of the game	643
	C.4	Rules of the game	643
	C.5	Notes	644
	C.6	How to fill in your trading sheet	645
		C.6.1 During a trading round	645
		C.6.2 At the end of the game	645
D	Contents of CD accompanying <i>Paul Wilmott Introduces Quantitative Finance, second edition</i>		649
E	What you get if (when) you upgrade to <i>PWOQF2</i>		653
	Bibliography		659
